

CLEMLAST-TC NOZZLES

CLEMLAST NOZZLES last longer and cost less!

Another CLEMCO innovation..... Rubber jacketed CLEMLAST nozzles. The jacket is made from two different rubber materials; a hard material in the thread area and a softer, more impact resistance material in the grip area.

Advantages over conventional nozzles:

- High elasticity and shock resistance with soft rubber material.
- Protection against slipping off by nozzle outlet stop.
- Smaller outside diameter of the nozzle grip area, thus better nozzle control when blasting.
- Large 50 mm thread prevents jamming of the nozzle in the nozzle holder because of debris in the thread.
- Good bonding between liner and jacket.
- Hard jacket in the thread area.

CLEMCO

...the performance system.
